

Student Resource Portal - Deliverable #2

Mobile Website

Date: 3/7/2025

Project Purpose

The UMSI Student Success team seeks to improve its web presence by designing a new website to better help students understand and locate resources available to them. The new site will feature an accessible and responsive design that works on multiple devices, a modern look and feel, and a refreshed site architecture and site content.

Our Commitment:

Deliverable #2 - Mobile website

- This will include all of the content in multiple styled html files
- This will be a mobile first design - which means that our default web design is for mobile devices and smartphones - not large screens (desktops/laptops)
- This website will be responsive and all content will be viewable at larger sizes

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

- This website will be fully accessible and will pass accessibility validators such as WAVE and Axe

Meets Client's Objectives

Explain how your website meets the client's needs for an updated website for Student Support Resources to better help students find and utilize resources available to them on campus to help them:

- Be more successful academically
- Achieve better school/life balance
- Find resources in times of crisis

I added more images to support the online resources provided by the School of Information. I used images from the actual online python resource pages that are linked to the School of Information spreadsheet for resources to position above each online learning tool description in the mobile view of my website. Having the online resources page with a simple layout of all the important online resources in mobile view will make it easier for students to find resources to be more successful academically. Additionally, I have a page dedicated to the basic student needs. In the mobile view, I listed resources such as health care, support, and housing for students to be aware of resources that can help them achieve work/life balance when dealing with assignments and living alone. These are in a single column format to make it easier to view on a mobile screen. I have linked the resources to Michigan Wellness, food, and finance to make it easy for students to find life resources. For my last page, I included the links and text for student tutoring in programming and math provided by the School of Information. The links are easy to navigate on the page for both English and math tutoring and lead directly to the available tutors at the School of Information. Although this page is mostly text, I use font weight and font size to differentiate the information.

Explain how your design fits their requirements of a visually appealing modern website that fits within [UM's Branding Guidelines](#)

The design that I chose incorporates the University of Michigan colors of maize and blue. I ensured these were used to be consistent with the current websites that I took for reference. I ensured that I used these colors with text and background to ensure that color contrast was accessible. The mobile view is listed in a grid column format. It is simple yet clean on the homepage and lists information in an easy-to-read format. I ensured that focus and hover for all buttons was accessible. For other pages, I also included grid column format and adjusted the images to be consistent in size. Additionally, I made the header and footer consistent across all pages.

Explain how your design optimizes site content and images to work on mobile devices.

To optimize site content and images for mobile devices, I used a responsive design that ensures all elements adjust dynamically to different screen sizes. I implemented a single-column layout for key resource pages, allowing content to be easily readable without excessive zooming or horizontal scrolling. Additionally, I resized images to be mobile-friendly, reducing their file size without compromising quality to improve load times. I also ensured that text remains legible by using appropriate font sizes and maintaining proper spacing between elements. Navigation is streamlined through a simple menu structure, making it easy for students to access resources efficiently on smaller screens. I also included alternative text in the case that some mobile browsers do not support displaying the image.

Explain how you ensured that your site is fully accessible and usable for all students - including those with different disabilities.

To enhance accessibility, I followed WCAG guidelines by ensuring high color contrast for readability and using alt text for all images to support screen readers. I implemented keyboard navigability, allowing users to navigate through the site without requiring a mouse. Focus indicators are included for interactive elements, ensuring they are visible when tabbed through by highlighting the site button with underline or a highlight around the button. Additionally, I used semantic HTML elements to improve screen reader compatibility and structured content logically. I also provided text alternatives for images and ensured that all essential functions can be accessed without relying on hover effects alone. I also ensured that the color contrast was using UM branding guidelines and was readable for those with visual impairments.

Explain how your design makes it easy for students to find resources and understand how to utilize them.

I structured the page with resources to have each logo of the resource come before the link and the information so students are able to easily see which resources I have included in the website and recognize familiar and unfamiliar resources. I also added effective bold headers for each section to make it easy for navigation. Using images to support resources makes it easy for students to read the website. I also added descriptions that are more concise and straightforward than the current website to direct students towards tutoring resources, python tutorials, and wellbeing services. Additionally, I used visual cues such as font weights, colors, and spacing to differentiate content and guide users.

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

Project Cost for Deliverable #2 Mobile Website

Item	Hours	Price	Total
Accessibility Testing	1	\$110/hour	\$110
Accessibility Fixes	2	\$110/hour	\$220
Designing navigation	0.5	\$110/hour	\$55
Responsive Design Work	2	\$110/hour	\$220
Styling website - aligns with UM Brand Standards	3	\$110/hour	\$330
Additional html & content work	1	\$110/hour	\$110
Other see below*		\$110/hour	
Total Costs:			\$1045

* If there are other items you worked on for the website outside of what was listed in the Project Costs

Project Costs for Other include:

- N/A
