

Student Resource Portal - Deliverable #3

Tablet/Desktop Website

Date: 3/30/2025

Project Purpose

The UMSI Student Success team seeks to improve its web presence by designing a new website to better help students understand and locate resources available to them. The new site will feature an accessible and responsive design that works on multiple devices, a modern look and feel, and a refreshed site architecture and site content.

Our Commitment:

Deliverable #3 - Mobile website

- This will include all of the content in one or more styled html files
- This will build on the mobile first design - the default web design (CSS) is for mobile devices and smartphones
- This means that the larger screen styling will be built on top of the default/mobile screen design.

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

- This website will be responsive and all content will be viewable at larger screen sizes
- This website will be fully accessible and will pass accessibility validators such as WAVE and Axe
- It will iterate on feedback given for Deliverable #2

Meets Client's Objectives

Explain how you iterated on feedback given for Deliverable #2 or how you iterated on your mobile design.

For Deliverable #2, I received feedback suggesting that I improve the mobile design's navigation by adding clearer structure and making it more user-friendly. I addressed this by restructuring the content into a single-column layout, making it more readable on smaller devices. Additionally, I refined the button interactions and added hover and focus states to improve accessibility. I also received feedback to reduce the complexity of the design, so I simplified the content presentation, ensuring students can easily find resources without being overwhelmed by too much information at once. I also added the fixes of changing the measurements in both views to be more fluid to meet the criteria and be more appealing as viewed from either view. I also added more structure to each of my pages and differentiated them so that the homepage was not the only page that had extensive styling.

Explain how your design optimizes site content and images to work on larger devices such as tablets or desktops.

Include in this explanation which screen-size you designed for.

How did you ensure these updates fit their requirements of a visually appealing modern website that fits within [UM's Branding Guidelines](#)

I designed the website to be responsive for devices with larger desktops (1200px and above). For desktops, I made the layout using multiple grid columns to distribute content evenly, ensuring that it was clean and easy to navigate. On larger screens, I made the layout take up all the page space but also kept spacing and padding to enhance the reading experience without overcrowding the page. The images are resized to fit pages across devices, ensuring a consistent appearance. I followed UM's Branding Guidelines by incorporating Michigan's maize and blue color palette. I also ensured the design was minimalistic yet functional, in line with university standards. I followed the format from my mobile view and added different styling with the same base colors and format to change the desktop view while not changing too much of the layout.

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

Explain what your unique/challenging contribution was for Deliverable #3 that helps your clients meet their goals, but wasn't asked for in an earlier deliverable.

For Deliverable #3, my unique contribution was the implementation of a dynamic JS form on page 3 which makes it so that tutoring resources are displayed based on the student's subject selection (Math or English). This was a feature I proposed to improve the user experience by making the page less cluttered and more personalized to each student's needs. By only displaying the relevant resources, I made it so that the interface is less crowded and ensured students quickly found the support they needed. This feature directly aligns with your goal of providing a clean and user-friendly platform for students to access academic resources.

Explain how you ensured that your site is fully accessible and usable for all students - including those with different disabilities.

To enhance accessibility, I followed WCAG guidelines by ensuring high color contrast for readability and using alt text for all images to support screen readers. I implemented keyboard navigability, allowing users to navigate through the site without requiring a mouse. Focus indicators are included for interactive elements, ensuring they are visible when tabbed through by highlighting the site button with underline or a highlight around the button. Additionally, I used semantic HTML elements to improve screen reader compatibility and structured content logically. I also provided text alternatives for images and ensured that all essential functions can be accessed without relying on hover effects alone. I also ensured that the color contrast was using UM branding guidelines and was readable for those with visual impairments.

Explain how you designed your 404 page and how you decided what to put on that page to help your end-users.

For the 404 page, I kept the design simple and clear. The page includes a helpful message that informs the user they've reached a non-existent page and offers a link to return to the homepage. I decided to include this link as it helps users navigate back to familiar content, reducing frustration. I also added a search bar to encourage users to explore the site and find the content they were originally seeking. The 404 page follows the general design principles of the website, using the same color scheme, fonts, and layout to maintain consistency across the site.

SI 339 Winter 2025 Client Proposal - Mobile Deliverable

Project Cost for Deliverable #3 Mobile Website

Item	Hours	Price	Total
Accessibility Testing	2	\$110/hour	\$220
Accessibility Fixes	3	\$110/hour	\$330
Navigation	1	\$110/hour	\$110
Responsive Design Work	1	\$110/hour	\$110
Additional html & content work	1	\$110/hour	\$110
Unique Addition for Deliverable #3	1	\$110/hour	\$110
New 404 Page	2	\$110/hour	\$220
Javascript (including for footer)	1	\$110/hour	\$110
Other see below*	N/A	\$110/hour	N/A
Total Costs:			\$1320

* If there are other items you worked on for the website outside of what was listed in the Project Costs

Project Costs for Other include:

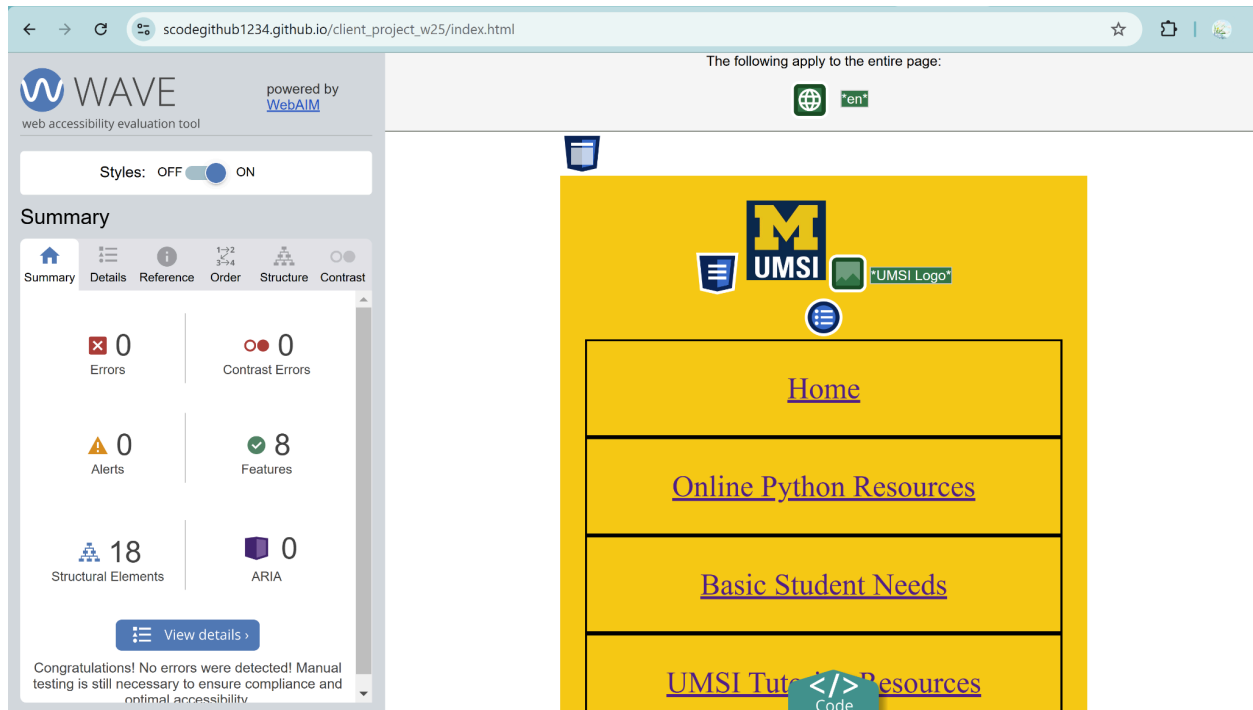

- N/A
