SentinelOne

Dear Hiring Team,

I am writing to express my strong interest in the Solutions Engineering Internship position at SentinelOne. As a Computer Science student at the University of Michigan, I am eager to bridge my technical skills with business impact while contributing to SentinelOne's mission to revolutionize cybersecurity through AI and innovation. Your Purple AI technology and Singularity Cloud platform particularly excite me as leading examples of intelligent, scalable defense solutions that meet modern security challenges head-on.

My academic and hands-on experiences have deeply aligned with the multifaceted nature of this role. In my Forensics and DFIR coursework, I performed detailed forensic investigations using tools like Autopsy and FTK Imager, recovered deleted files, analyzed disk images, and simulated SIEM environments to detect advanced threats like SQL injection, XSS, and buffer overflow attacks. These projects sharpened my analytical thinking and technical storytelling, skills vital for supporting pre-sales engagements and communicating value to customers.

I've also tackled real-world security problems through a development internship, where I built secure RESTful APIs, enforced HTTPS and input sanitization in Angular applications, and helped design a hardened Rules Engine using Drools and ANTLR. My contributions included mitigating injection risks, reducing third-party dependencies to address supply chain threats, and implementing secure token handling in Postman for API testing. These experiences taught me to think both defensively and collaboratively, qualities that are great for this customer-facing technical role.

What draws me most to SentinelOne is your unique combination of AI-driven technology and cross-functional culture. The opportunity to collaborate with sales, product, and engineering teams on live PoCs and customer demos, while learning directly from industry leaders, represents exactly the kind of environment where I can thrive. I'm excited to contribute to real-world projects, expand my understanding of the cybersecurity landscape, and support SentinelOne's clients in realizing the value of solutions like Purple AI, Singularity Cloud, and other cutting-edge security tools.

Thank you for considering my application. I am excited to bring my curiosity, adaptability, and drive to SentinelOne's Solutions Engineering team and contribute meaningfully to your projects and mission.

Warm regards,
Shikha Nukala
