

Coaching Classes Related:

1. What do I do if my child is going to miss a class?

Please email your coach and get the materials that will be covered during that class. You can work them out at home. If you have any question in it, you can forward them to your coach and get it clarified.

2. How does class participation work in the online class??

Parents are requested to ensure that their child participates in every class and is respectful of other students. Students should be discouraged from disruptive behavior such as writing on the shared whiteboard or chat window while the coach is teaching. Their phone should be set to mute setting unless they are called upon to speak.

Different students are at different levels so don't let your child get overwhelmed or discouraged if some concepts are new to them.

3. Can I get answers along with homework problems?

No, the coaches give just the problems for homework. The answers (not solutions) will be available for download from the NSF site after the homework due date. In the next class, these problems are discussed and the solution is provided. This will give an opportunity for the kids to try the problems on their own.

4. Is it okay if I help my child with the homework?

Yes and No. No, do not jump right in and do the problems for your child. This will not give a chance for your child to do some deep thinking and be challenged. Yes, when a child is stuck with a problem you can give some hints for the child to think in the right direction and arrive at the answer.

5. I am too busy with my work. Can I rely on the coach to take care of my child?

No. NSF Coaching is a good starting point in the right direction to prepare your child for the MATHCOUNTS competition. As we said earlier, coaches are volunteers and each coach has about 20 children to handle. So don't rely solely on the NSF coaching for your child to win the competition.

Parents Contribution:

6. As a parent, how can I help my child?

You can provide a quiet environment for your child to work every day especially during the online coaching session. Kids will be on the phone and on online session during the class, so a quiet, undisturbed place will help your child a lot. To fare well in MATHCOUNTS competition speed and accuracy are important skills to acquire. So every day practice in solving math problems will be helpful.

32. How can I help in NSF Mathcounts and Pre-Mathcounts coaching?

You can volunteer to be a coach. You can send an email to nsfmathcounts@northsouth.org telling us your background, class timings you can teach and why you want to become a coach. Based on the needs and your background we will evaluate and assign you with a specific level.
