

Thanks for your interest! We are a student organization. We provide tooling, space, financial resources, and mentorship to all students for use on personal build projects. Current resources available include:

- Metal working
- Drill press
- Horizontal & vertical bandsaws
- Bead blasting cabinet
- Paint room
- Assorted hand tools
- Assorted fasteners
- Assorted billet aluminum stock
- Benchtop work space
- Electronic fabrication equipment
- 3D printers - free filament!
- Locker space for in-progress projects

Here is how you can get involved and start working on your projects:

Here's how you can get involved and start working on your projects:

- 1. Identify Your Project Goals:**
 - Define the purpose and scope of the project.
 - Determine what technologies or tools you'll need (e.g., Django, Python, databases).
- 2. Set Up Your Development Environment:**
 - Install necessary tools (e.g., Python, Django, code editor).
 - Set up a version control system like Git to track progress and collaborate.
- 3. Familiarize Yourself with the Project Structure:**
 - Review the existing codebase (if applicable).
 - Explore any relevant documentation or guidelines for the project.
- 4. Break Down Tasks:**
 - Split the project into smaller, manageable tasks.
 - Prioritize them and set deadlines to stay on track.
- 5. Start Coding:**
 - Begin with setting up models, views, or routes depending on the project.
 - Ensure you're following best practices (e.g., writing tests, documenting code).
- 6. Get Feedback and Collaborate:**
 - Share your progress with mentors or team members.
 - Collaborate on GitHub or other platforms for code review and suggestions.
