

Fast Food Breakdown

1. Imagine that you get to go to your favorite fast food restaurant for lunch. What would you typically order?

I would order a turkey sandwich.

2. Look up the calories, total fat, saturated fat, dietary fiber and sodium for each item you ordered. Add up the total calories, fat and sodium for your meal.

Calories: 1060

Fat: 48g

Sodium: 1500mg

Fiber: 7g

3. You can find nutritional information for major fast food chains online.

4. Keep in mind the daily recommendations listed below, how did your meal measure up?

Teenage girls need 1,800 to 2,100 calories each day.

Teenage boys need 2,200- 2,700 calories each day.

Teenage girls should consume 21 to 25 grams of fiber each day.

Teenage boys should consume 30 to 38 grams of fiber each day.

In terms of total fat intake, you should eat less than 65 grams per day.

In terms of saturated fat intake, you should eat less than 20 grams per day.

In terms of sodium intake, you should eat less than 2,300 mg per day.

It measured up to less than everything on the list.

5. After your imaginary fast food meal, how many calories, grams of total fat, grams of saturated fat, grams of fiber and milligrams of sodium do you have left to use for your other meals and snacks throughout the day? After this meal, will it be a challenge to get enough fiber in your diet while keeping within the recommended limitations for calories, fat and sodium.

Left:

-Calories: At most 600

-Sodium: At most 800 mg

-Fat: 17g

-Fiber: At most 18g

6. Look at your menus again and pick a healthier meal.

The sandwich is the healthiest option.
