

Assignment 7 Questions Template

Make a copy of this document. Answer the following questions as a group before leaving class today. Turn in one document per group.

1. List Uniqnames of each group member separated by commas - If you are working individually, please just list your Uniqname

desigirl, anushac, sophieli, wanpilc

2. You might have noticed that the gameplay description doesn't quite make sense. Comment on what was unclear and why. Describe the specific revisions you would suggest.

- Many players may not know what the term “top-down” means. This can be clarified in the document.
- We don’t know what the positive and negative objects are - specify what these objects look like in the game.
- What interaction will users have with the various game objects? Describe a specific interaction from the game.
- What is the main genre of the game? Specify what the user is supposed to achieve in the game overall.
- Explain why using the grappling hook is the main objective of the game. Explain what type of objects are good and what objects are not.

3. You might have noticed that risks #1 and #3 are very similar. Why do you think the authors treated them as separate? Discuss any benefits or problems associated with this document design choice.

The authors use risk #1 to describe why video games with many built-in features are too complicated for a general audience and therefore decided not to include too many features. This is contradictory to risk #3 which explains why having a very simple game is also bad for customer retention. This is a problem if a potential partner in the game development is reading the document. These

risks make it seem like the creators are not confident in the game because it is too simple, but they cannot improve the game because it would become too complicated. It is best to combine these risks into the first risk and outline how the creators plan on making the game addictive without overcomplicating it.

4. What other risks, if any, do you think should have been addressed? Explain why.

They should address competition from other games that are similar in user interaction and theme to this game. If there is competition for the game it is likely that a gaming audience will only play the game that they are familiar with instead of trying something new. They should explain how this game has the potential to draw in players who are already familiar with similar games.

5. Comment on some grammar/usage error (think Gopen and Swan, Ramsey, if it helps). Describe what effect, if any, these grammar/usage errors have on the document's effect on the reader.

In some places in the document there are grammatical errors such as using “there” instead of “their,” repeating lines multiple times such as restating the use of the grappling hook in the game and continuously using the word “crazy” to describe the experience in the game. The reader is dissuaded from taking the document seriously because the grammatical errors indicate a lack of attention to detail which could cause readers to infer the same about the game.

6. What's wrong with the last line on page 6?

There is a header on the last line of page 6 but the content for that header starts on the page after. This makes the content more difficult to read and makes the scope look professionally formatted.

7. What's wrong with the first line on page 9?

The name of the programmer is not written out correctly. This can make the document seem unprofessional if there are general mistakes such as not filling out the name correctly.

8. What are the THREE most important changes you think these authors should make before they send their document upward to whomever asked for it? List them in order of priority.
- a. The first important change these authors should make is to proofread the scope to ensure there are no grammar mistakes and also improve the formatting so that their document looks professional.
 - b. Go over and revise necessary screenshots. For instance, show a screenshot of a game with two players as one player is unnecessary given that the game is set as multiplayer.
 - c. Explaining the game in a brief, detailed manner instead of separating the game functionality across the entire document. The order should be: objective of the game, number of players, screen layout, index of controls, explanation of objects in the game, and how to play the game from the lens of one player.
