Human Resources

Roosevelt Innovations

Dear Hiring Team,

My name is Shikha Nukala and I am currently pursuing a Bachelor's in Computer Science at University of Michigan. I have spent the last year learning and implementing algorithms to write programs that apply to real-world scenarios. I am excited to bring this knowledge and practice to Roosevelt Innovations as a Summer 2024 Intern in Knowledge Science.

I have over four years of experience using Java, C++, MATLAB, and Python through high school and college courses, as well as college clubs and online resources such as GitHub and Leetcode. I have used a variety of algorithms in C++ and Python to implement machine learning programs. Additionally, I have used open source development to collaborate with other coders and start on project demos such as programming an in-home assistant. I also have over five years of experience as a varsity debater, giving me strong public speaking and communication skills as well as extensive research skills. This summer, I worked for Roosevelt Innovations as an intern in Knowledge Science. This internship gave me the unique opportunity to work with rule-based systems and create software on a fundamental level through software tools such as ANTLR and Lisp, and understand the importance of ground-level software.

In my academic and career development, I have sought to work hard while learning and improving as I gain more experience. I intend to bring the same energy, drive and commitment to this role and your organization. Please feel free to contact me at (517) 899-8126 or snukala1@gmail.com. I look forward to speaking with you and appreciate your time and consideration.

Thank you,
Shikha Nukala
