

Names _____
Presentation Readiness (turn in at end of lab, five assignment points)

Circle your experiment- Part IV V VI VII VIII IX

What was your starting hypothesis?

Give a brief description of your procedure, making clear what was in each tube and how the tubes were prepared/treated before starting the reaction.

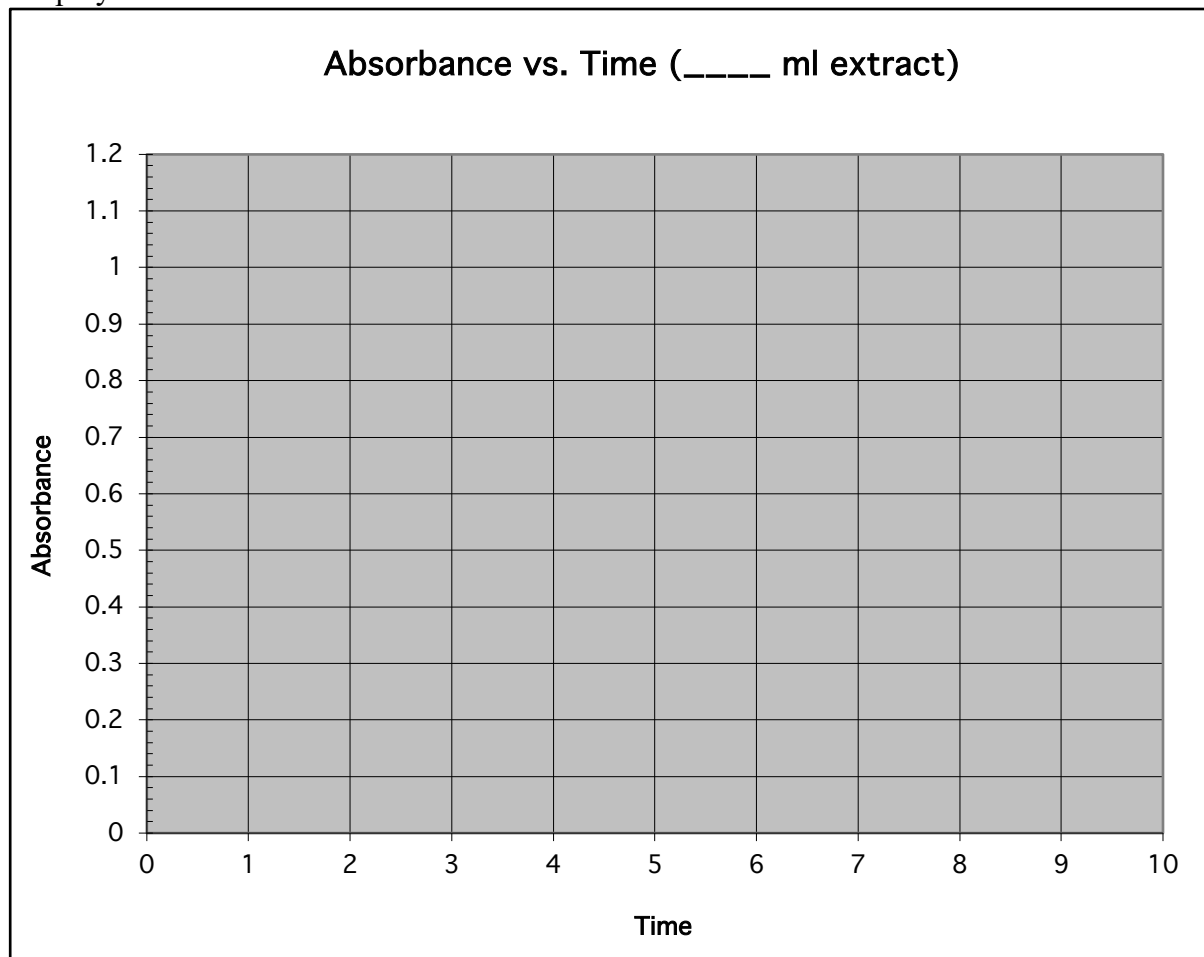

Report your data below, using a separate column for each tube

Time (min)						
0						
1						
2						
3						
4						
5						
6						
7						
8						
9						
10						

initial rate						
--------------	--	--	--	--	--	--

% inhibition (if applic)						
-----------------------------	--	--	--	--	--	--

Graph your data below

What conclusions can you draw? Was your hypothesis correct? Sources of error?
